

**Light installation
(produced by black neon)**

of Klara Kuchta

Human mind is selective. It is effected by many impressions from the surrounding reality, and it reflects only a few of them.

Matter is selective. It is effected by a rich spectrum of colours (frequencies) of light, and it reflects only a few of them; in some cases even in moderated frequencies (colours).

Artist's mind functions like a special filter: reflects the world as she/he perceives it. So does Klara Kuchta when she applies "light powder".

Light powder is a sort of matter what filters light and reflects any electromagnetic light wave only in a given frequency, characteristic to its own internal properties.

As it is presented, this is a segment of Klara Kuchta's world.

(György Darvas)
